```
C++設計小考1
姓名:
int f1(int arg){
  if(arg \le 0)
    return 0;
  if(arg \% 2 == 0)
    return arg*f2(arg-1);
  return -arg*f1(arg-1);
int f2(int arg){
  if(arg <= 1)
    return 1;
  if(arg \% 2 == 0)
return arg+f2(arg-1);
  return arg-f1(arg-1);
}
int main() {
  int N = 5,ans;
  ans = f1(5);
  cout << ans;
  return 0;
}
2. 下方是MergeSort的程式碼,但有部分被塗改掉,請完成以下程式。(A)___idxLeft <
    leftSize && (idxRight >= rightSize || LeftSub[idxLeft] <=</pre>
    RightSub[idxRight] (B) MergeSort(array, mid+1,
    end);(C) Merge(array,front,mid,end);
void Merge(vector<int> &Array, int front, int mid, int end) {
  vector<int> LeftSub(Array.begin() + front, Array.begin() + mid + 1);
  vector<int> RightSub(Array.begin() + mid + 1, Array.begin() + end + 1);
  int idxLeft = 0, idxRight = 0;
  int leftSize = LeftSub.size();
  int rightSize = RightSub.size();
  for (int i = front; i \le end; i++) {
                                      //(A)
       Array[i] = LeftSub[idxLeft];
       idxLeft++:
    }
    else
       Array[i] = RightSub[idxRight];
       idxRight++;
    }
  }
}
void MergeSort(vector<int> &array, int front, int end){
  if (front < end) {
    int mid = (front+end)/2;
    MergeSort(array, front, mid);
                           //(B)
                              //(C)
}
```

```
3. 以下程式輸出為_1 asm, 2 python, 3 Java, 3 iOS, 5 C#,_。
void forOps() {
  int i = 1;
  vector<string> myList = {"asm", "python", "C++", "Java", "iOS", "perl", "C#"};
  for (const string& index : myList) {
    if (index == "Java" || index == "python") {
       cout << i << " " << index << ", ";
    } else if (i % 2 != 0) {
       cout << i << " " << index << ", ";
       i = i + 1;
    } else {
      i = i + 1;
    }
  }
}
int main() {
  forOps();
  return 0;
}
4. 以下程式執行結果分別為 30、60, 請完成以下程式
   (A) 3 (B) height=2
double get_area(double length, double width = _____, double_____) {
//(A)(B)
  return length * width * height;
}
int main() {
  double result1 = get_area(5);
  double result2 = get_area(5, 6);
  cout << "Result 1: " << result1 << endl;
  cout << "Result 2: " << result2 << endl;
  return 0;
}
5. 給定函式 a(), 當執行 a(10)時, 最終回傳結果為何?___-3840_____
int a(int i) {
  if (i>0)
     if (((i/2)\%2)==0)
          return af(i-2)*i;
     else
          return a(i-2)*(-i);
  else
     return 1;
}
```

```
6. 給定以下程式,當程式執行完後,輸出結果為何?__75312468____
int A[8] = \{8,7,6,5,4,3,2,1\};
int main () {
  int i, j;
  for (i=0; i<8; i=i+1){
     for (j=i; j<7; j=j+1){
        if (A[j] > A[j+1]){
          \mathsf{A}[j] = \mathsf{A}[j] + \mathsf{A}[j+1];
          A[j+1] = A[j] - A[j+1];
          A[j] = A[j] - A[j+1];
       }
     }
  for(i=0; i<8; i=i+1){
     cout << A[i] << " ";
  }
}
7. 給定右側函式 f(), 已知 f(14)、f(10)、f(6)分別回傳 25、18、10, 完成以下程式。
    (A)___n/2_
int f(int n) {
  if (n < 2) {
     return n;
  else {
     return (n + f(____));
                              //(A)
  }
}
8. 以下程式輸出為何?____-2_
     void f(int x, int y) {
        int tem = x;
        x = y;
        y = tem;
     int main(){
        int x = 2, y = 3;
        f(x,y);
        cout << (x-y)*(x+y)/2;
        return 0;
    }
9. 請在右側空白處將以下輸出作答出來。
int k = 4;
int m = 1;
     for (int i=1; i<=5; i=i+1) {
          for (int j=1; j <= k; j=j+1) {
                printf (" ");
           for (int j=1; j<=m; j=j+1) {
                cout << "*";
          }
          cout << endl;
          k = k - 1;
           m = m + 2;
     }
```

```
*
***

****

******
```

10. 請問以 q10(13,15)呼叫以下 q10()函式, 函式執行完後其回傳值為何?
